

Interlake's most popular and versatile product, our Interack-30<sup>®</sup> of roll formed selective rack products provides efficient use of space and immediate access to every load stored. With the industry's largest selection of sizes, gauges and accessories, Interlake Selective Pallet Rack is the right solution for most every storage need. For over 40 years Interlake Material Handling has been the leading manufacturer of storage rack in North and South America. From basic carton and pallet storage to the most complex order picking operations, no one offers a broader range of products and services to help customers reduce costs, increase sales and improve productivity.

## Features and Benefits

- Immediate access to every load provides efficient use of floor space and minimizes load/unload time.
- Automatic beam to frame locking device reduces installation time, facilitates re-profiling and protects against accidental disengagement.
- Patented beam to frame connection combines high capacity with the most rigid and secure rack system in the industry.
- Designed to exceed the most current RMI (Rack Manufacturers Institute) specifications for maximum safety.
- A wide variety of sizes, gauges and accessories to custom-fit any application.

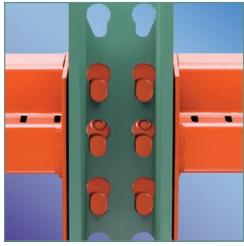

## Interlake Express

Interlake's Quick Ship program for the most popular Selective Pallet Rack components. Interlake Express offers speedy, cost-effective delivery to all points in North America. Available through your authorized Interlake Dealer.

# Selective Pallet Rack

## The Interlake Connection

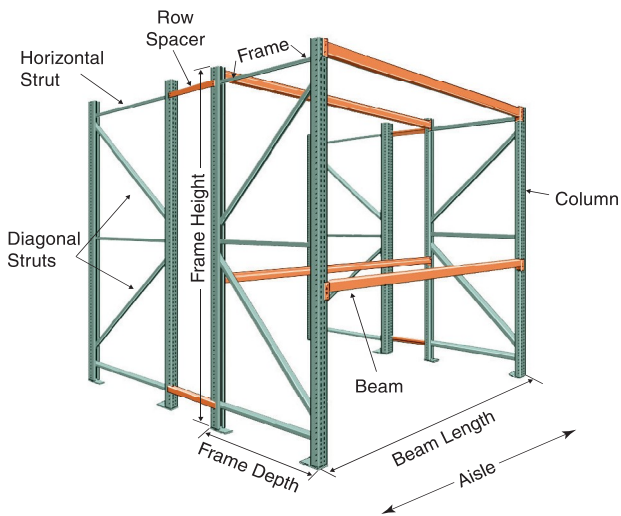

The foundation of the Interlake rack system is its unparalleled beam-to-upright connection and automatic locking device.

The stud design and column punching draw tighter together under load to create the industry's most sturdy and secure connection while maximizing system capacity.

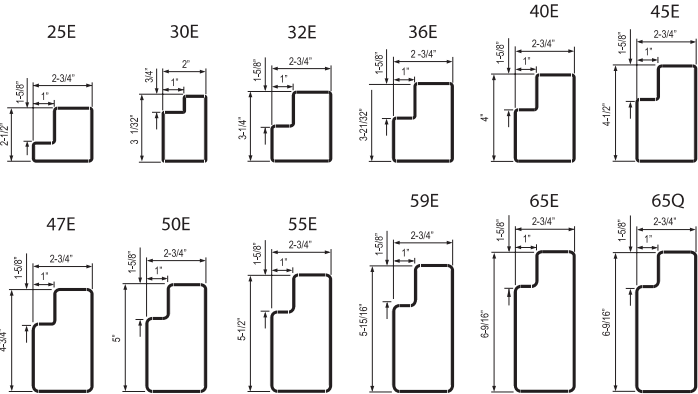

The proprietary beam-to-upright locking system engages automatically upon beam seating, facilitating installation and re-profiling while protecting against accidental beam release.

The piston lock is damage and tamper resistant, and stays snugly in place during use.

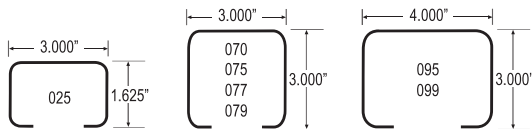

### Standard Beam Profiles Typical Length of 36" - 180"

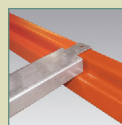

### Frames

Can be designed to support up to 60,000 lb. loads.

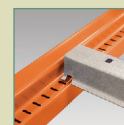

### Columns

### Common Accessories

**Flanged Crossbar**

**Roll-In Crossbar for Slotted Beams**
